

Review of Dive into digital image processing:

1.Things that I liked:

The theory material(resources) was very to the point and the material to be covered in a week was also manageable. In other words, for all the tasks we had enough time to complete. And the assignment were fun.

2.Things that I didn't like:

2nd assignment (it was hard)

3. Scope of improvement :

I can't think of anything for now

4.How were the assignments?

They were fun and interesting . Some were a bit hard though.

5. Were provided resources sufficient to complete the assignment?

yes the material was very resourceful and to the point , so it was sufficient to complete the assignments but required a little bit of extra help from google.

6.Mentor review:

My mentor was very corporative. Whenever I got stuck anywhere he helped me out .This corporation led me to complete this project.

Overall SOC was the most productive thing I did this summer vacation.
